

Press Release August 8, 2019

ANIVADO launches the first one-theme course in Equine Clinical Ethology: Cribbing & Wind sucking. An online course about the stereotypic behaviour cribbing and specifically designed for equine veterinarians.

The course is presented by Dr. Machteld van Dierendonck, who works as a behaviour specialist, scientist and practitioner in the field of (equine) behaviour and welfare (including assessments) for the last 15 -20 years. The content of the course is based on the lecturers' practical experience based on her cribbing cases in the Equine Behavioural Referral Clinic and is underpinned with information from peer reviewed scientific studies.

The course Cribbing & Wind sucking has been accredited with 4 PE points by [PE-online](#) and is specifically designed for equine veterinarians to provide a condensed insight in the causation, diagnosis, treatment and prevention of the stereotypic behaviours cribbing and wind sucking. Animal science students and equine professionals with a higher professional education may also appreciate the content of this course.

The ANIVADO platform can connect with other learning managements systems. Therefore, we are happy to discuss B2B solutions with educational organizations who would like to offer this course (or other ANIVADO courses).

Please, visit www.ANIVADO.com for more information about the course.
